

## CPP Science Course

**Mission:** Our mission in this course is to provide a framework for creating a strong and applicable scientific foundation.

**Class Overview:** In the science course at CPP, we aim to dive into scientific topics that will prepare the students for college-level science courses. The topics we will cover are the ones that a student will take in college and are tested on the MCAT. These include biology, biochemistry, general chemistry, organic chemistry, physics, psychology, and sociology. This course will foster an understanding of these topics by reading and analyzing scientific papers, practicing MCAT passages, and doing presentations.

**Who Is This Class For?:** This class is meant to prepare students in high school who are interested in the sciences and contemplating pursuing a science degree.

**Expectations:** This course will require full participation. Full participation is defined by paying attention in class, asking questions, doing homework, and working alongside your class to collaborate on presentations and paper analyses.

**Contact:** If any questions/comments arise, please reach out to Roop Dhillon at (408)-763-7002.
